# GEF LME:LEARN Components

1. Global and regional network of partners
2. Synthesis and incorporation of knowledge
3. Capacity and partnership building
4. Communication, dissemination and outreach

[iwlearn.net/marine](http://iwlearn.net/marine)

## COMPONENT 2: SYNTHESIS AND INCORPORATION OF KNOWLEDGE

---

- LME:LEARN objective: generate harmonized knowledge product
- harmonized set of tools
- seven toolkits
- existing science
- harvesting experiences and best practices
- other non-GEF marine and coastal initiatives

# MARINE TOOLKITS BROCHURE

# WHAT ARE MARINE TOOLKITS?

- assist GEF funded and other projects working in marine related focal areas
- address emerging priorities and new requirements
- promote innovative approaches
- hundreds of tools
- numerous references, available online

<https://iwlearn.net/manuals>

# CHARACTERISTICS OF MSP

- Ecosystem-based
- Integrated
- Place-based or area-based
- “Soft space” planning
- Adaptive
- Strategic and anticipatory
- Participatory

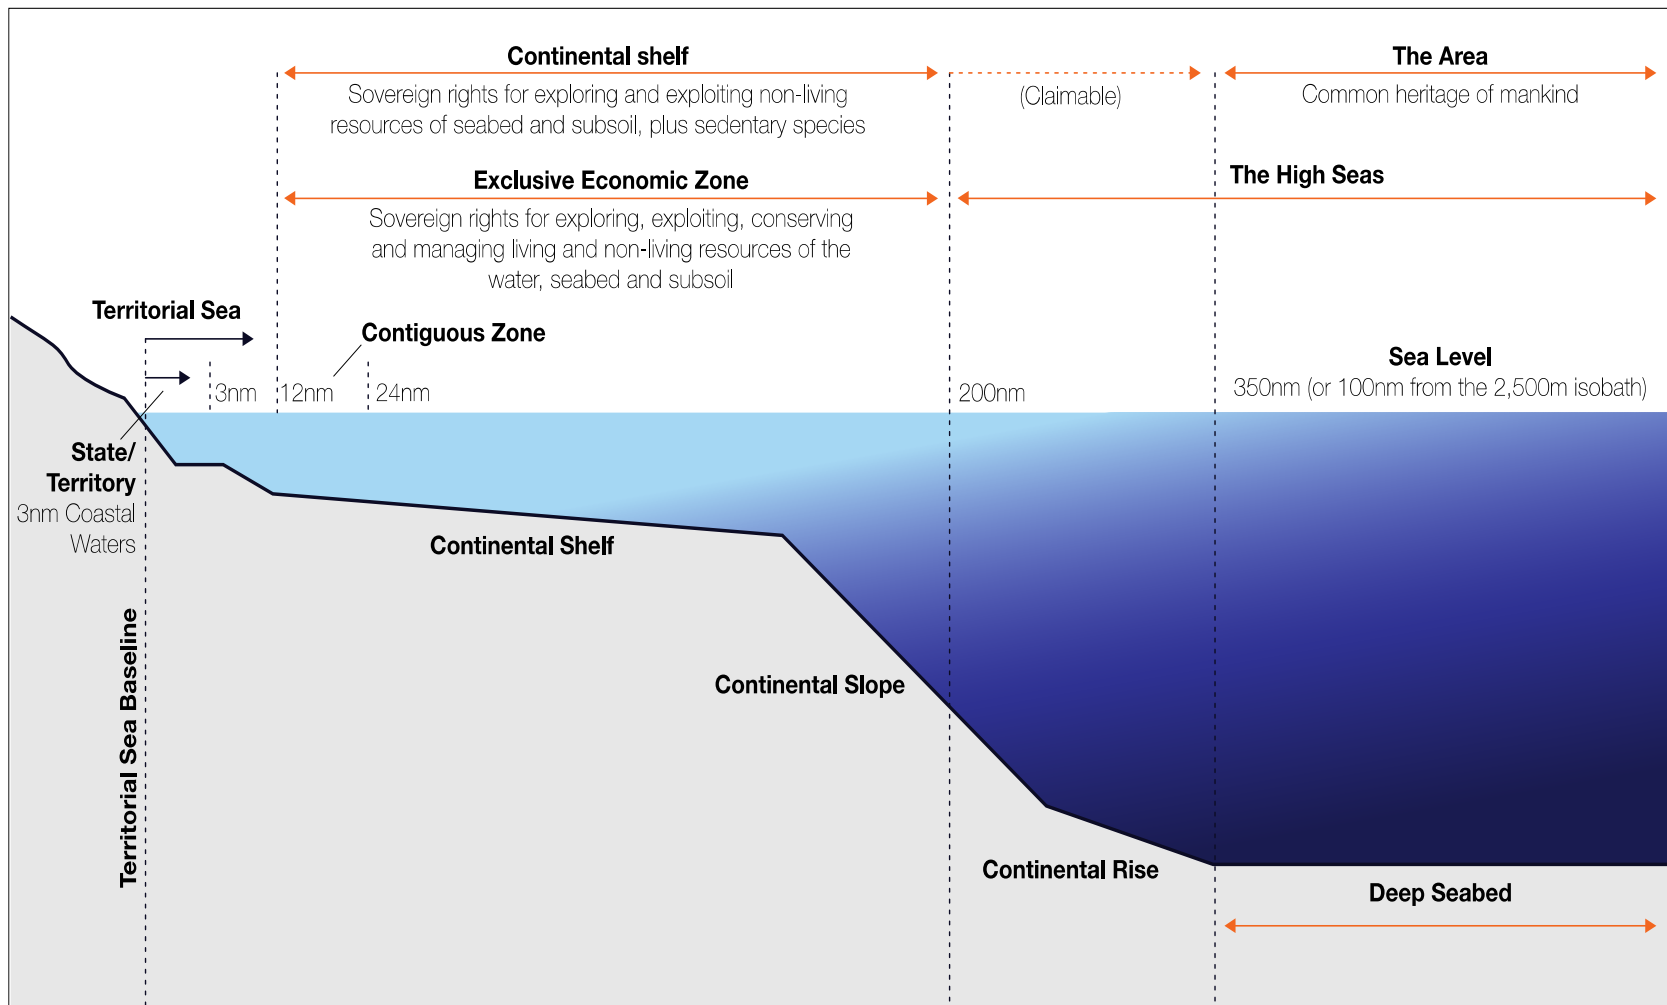

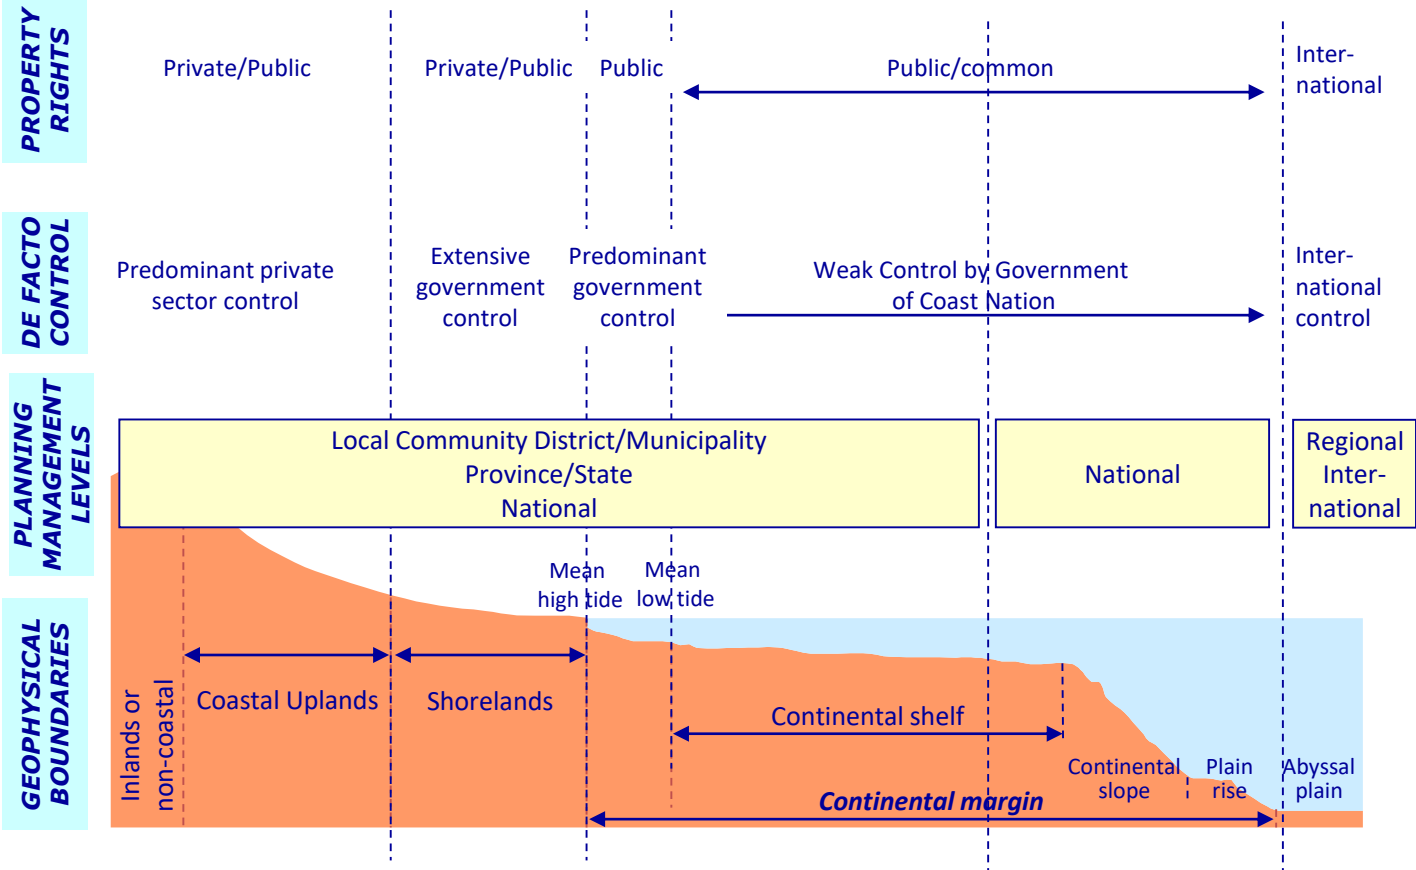

Figure 1. Diagram of maritime zones (based on figure from the Global Carbon Capture and Storage Institute<sup>1</sup>)

# BOUNDARIES PERTAINING TO THE DELINEATION OF COASTAL AREAS: THE PHYSICAL, ADMINISTRATIVE AND LEGAL CONTEXTS

# TRANSBOUNDARY MSP

- typical for Large Marine Ecosystems
- delineating boundaries is fundamental
- delineation most often defined by political and jurisdictional borders
- MSP is normally conducted by national or sub-national authorities
- borders do not always correspond to the limits of ecosystems
- ecosystem-based approach
- majority of 66 LMEs span across national jurisdictional boundaries
- LME boundaries do not always correspond to the given jurisdictional boundaries

# CROSS BORDER MSP

- **cross-border MSP** - engagement between two or more entities that share a common political border (e.g. neighbors)
- disputes

# TRANSBOUNDARY MSP

- **transboundary MSP** - engagement of multiple entities (e.g. countries, states, provinces) across one ecosystem, who also do not have jurisdiction over the entire ecosystem
- expands beyond national boundaries and the high seas
- each entity has jurisdiction over some ocean spaces, but not all, for MSP, etc.
- sub-national, regional, or international
- level of complexity

# MSP TOOLKIT

# WHAT IS THE MSP TOOLKIT?

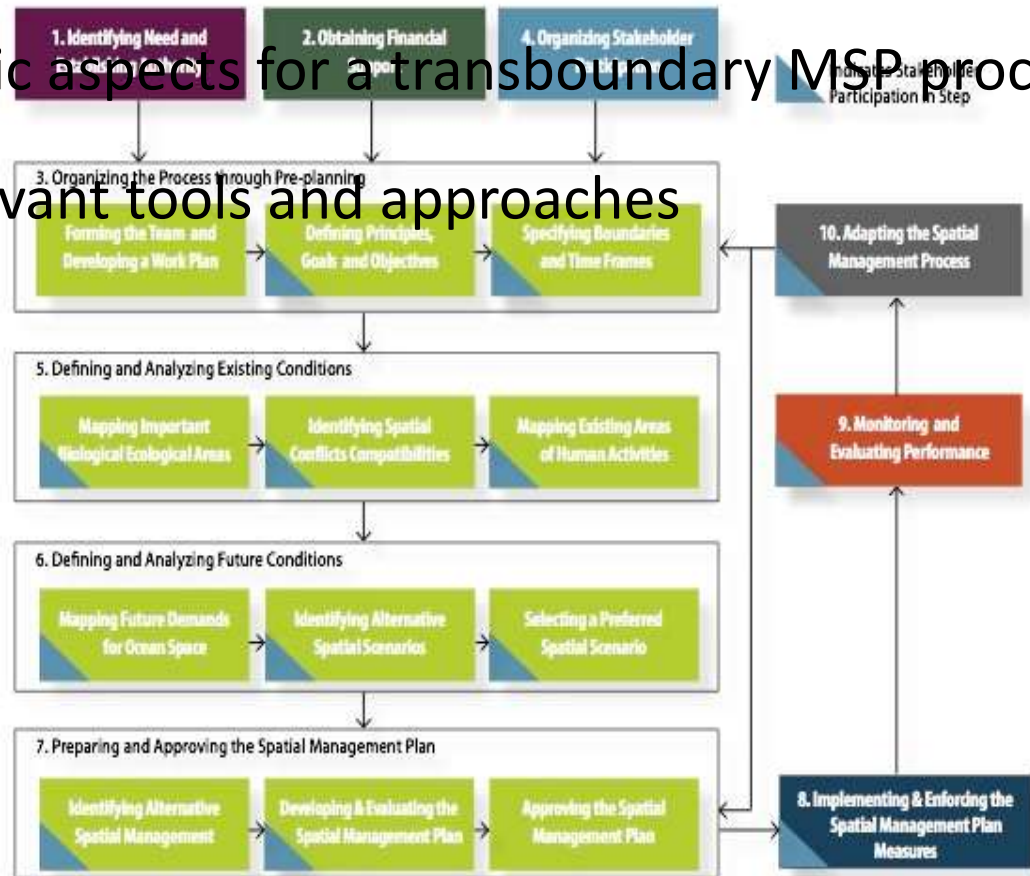

- practical guidance with examples of tools and methods
- existing LME MSP experiences as well as other transnational MSP practices
- promotes an integrated, collaborative approach to coastal and ocean management
- training:  
**[iwlearn.net/learning/courses](http://iwlearn.net/learning/courses)**

## STRUCTURE OF THE MSP TOOLKIT

## general components of an MSP process

highlights specific aspects for a transboundary MSP process

## examples of relevant tools and approaches

## TARGET AUDIENCE

- those who will initiate an MSP process in the LME context
- those who are already involved in transboundary MSP
- those that need guidance initiating the very first transboundary MSP process within a given LME

# CONTENTS OF THE MSP TOOLKIT

- Introduction to Transboundary Marine Spatial Planning
- Designing the Transboundary MSP Process
- Stakeholder Engagement in Transboundary MSP
- Analysing the Current Conditions
- Analysing future conditions & developing joint visions
- Solutions, Planning and Implementation
- Monitoring & Evaluation of Transboundary MSP

## HOW SHOULD YOU USE THE TOOLKIT?

- interactive online and downloadable PDF resource
- available on the Marine Toolkit Portal, which can be found at [www.iwlearn.net/manuals](http://www.iwlearn.net/manuals)
- self-standing document
- each section of the toolkit describes a distinct method
- users can move sequentially through the toolkit or go directly to the sections that are relevant to their needs

- integrated product
- links between each topic are highlighted so that users can easily navigate between sections to find appropriate solutions and tools to address their challenges.

- throughout each toolkit, links are made to other useful resources and links between each topic are purposefully highlighted
